

Sequence

Consensus length: 6,064 bp.
Evidence source:
Rebase-backed sequence record.

Representative locus

Representative genome locus available in TE-KG: chr1:231646101-231652225.

Disease links

Graph relations connect L1HS with cancer, carcinoma, colorectal cancer, lung cancer and disturbed spermatogenesis.

Literature evidence

Disease and regulation claims link back to PMID-level records. Literature nodes are evidence records rather than entity-composition counts.

Expression context

Expression summaries can be inspected across normal tissues, normal cell lines and cancer cell lines.

Assistant synthesis

The assistant retrieves and organizes database evidence, but it is not an independent scientific evidence source.
